

# Reflections From the Day

# What did you learn about sustainability from your discussion?

I learned that back then when my grandparents were kids they didn't talk about sustainability in class and no one knew that it would be like this now.

# How has the community/neighborhood changed over time?

Yes, people are trying to recycle things now because now we are aware of what's happening.

# **Describe your ideal community in five words**

- 1. Family**
- 2. Not-polluted**
- 3. Caring**
- 4. Cooperation**
- 5. Oneness**

# How can/do you make a difference in reducing your own ecological footprint?

One way is to turn off your lights and don't use water when you don't need it. For example, if you are brushing your teeth you don't need to keep the water on because that's wasting it.

# How can/do you make a difference in reducing your own ecological footprint?

One way is to turn off your lights and don't use water when you don't need it. For example, if you are brushing your teeth you don't need to keep the water on because that's wasting it.

# **What is the biggest challenge/obstacle in the way of a move towards sustainability, and how might that obstacle be overcome?**

people had to re-educate themselves to learn new ways because some needed to change.

# How can we ensure that we are creating a sustainable future?

We only get what we NEED for example we want a nice car but we don't need a nice car. Also to create a sustainable future we have to not waste water and electricity. We should also recycle.

**If you had a time machine and were able to go back 50 years, what one change would you make in order to create a more sustainable future?**

I would change that people wouldn't pollute because now the oceans are filled with so much plastic and other things that shouldn't be in the ocean.
